

VSS™ Magnetic Vessel Skin Sensors

Brand: Daily Thermetrics

Short Description

Unsurpassed in reliability and accuracy for real-time monitoring of temperature variations on ferritic vessel surfaces, Daily Thermetrics' Magnetic VSS™ is the best solution for increasing sensor density without compromising the integrity of the vessel surface.

Description

The Magnetic VSS™ installs within seconds and provides optimum contact of the sensor to the vessel surface for the life of the sensor. When the job calls for superior heat transfer, accurate temperature measurement, and the ability to exchange sensors without successive welding, refiners turn to Daily Thermetrics and the Magnetic VSS™. The Magnetic VSS™ proprietary design allows for effortless replacement of the sheathed sensor without the need to remove vessel insulation or hot-work.
