

Reotemp Cooling Towers

Brand: Reotemp

Short Description

Reotemp Cooling Towers protect pressure instruments from extremely hot process media without the pain and hassle of remote mounting the instrument. It is specifically designed to mount above a diaphragm seal or thread directly into the process. Reotemp's unique design can reduce the process temperature by up to 700°F!

Description

Cooling towers may be threaded directly into process media in applications where the fluid is viscous enough to flow through a 3mm ID tube without clogging. For ultimate performance, mount cooling tower above a diaphragm seal. If mounting between pressure instrument and diaphragm seal, use 3-digit mounting code in diaphragm seal part number. Pigtail siphons or diaphragm seals should be used for steam service.
