

ATTEC Process Custom Skid System

Brand: Hydro-Thermal

Short Description

The ATTEC® Process Skid System is a custom-built, direct steam injection skid system designed for precise heating applications. Each system is engineered to your specific process needs, incorporating a Hydroheater® that ensures rapid and efficient heat transfer without hammering or fouling.

Description

ATTEC skids are turnkey systems incorporating direct steam injection Hydroheaters are furnished with skid-mounted piping assembly, training and start-up services. We integrate the piping assembly with a customized, PLC-based, fully automated control panel as customized to your process. Your operators can continuously monitor the process at all points throughout the system without leaving the control room. ATTEC® designs are readily interfaced with distributed control systems and available with technical assistance and support.
