

ES70

Brand: Michell Instruments

Short Description

Mounting options on the interior or exterior panel of the enclosure. Process connection via 6mm or 1/4" pipe fittings. High-quality components, stainless steel pipes and fittings. Sample inlet pressure up to 138 barg. Flexible filtration options. Transmitter selection, flow and pressure control. Comprehensive documentation options with BS EN 10204 3.1 and NACE MR0175 certification available.

Description

Instrument analyzers are only as reliable as the sample extraction, handling, and conditioning techniques used. The ES70 line of sampling systems offers a range of configuration options to cover all process moisture and dew point application needs, ensuring accurate and repeatable results. Choices include panel or enclosure mounting, filtration type, upstream and downstream pressure control, and flow control.
