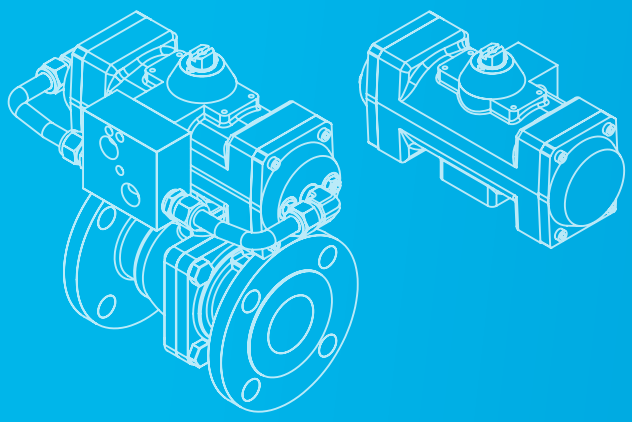
Max-Air Technology

SS Series Stainless Steel Actuators

316 Stainless Steel actuators provide corrosion resistance for the most demanding applications.



SS Series actuators take corrosion resistance to the extreme with all of the great engineering features that separate Max-Air from the competition. Our stainless steel actuators conform to the ISO standard which makes valve automation easy and cost effective. Max-Air Technology's dual patented travel stops allow up to 110° of stroke in a 90° actuator, providing exceptional positioning adjustment.

3-YEAR LIMITED WARRANTY

Max-Air Technology Inc. | The Best Way to Automate Your Process

Max-Air Technology provides the following warranty regarding its products. THE WARRANTY STATED HEREIN IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES AND REPRESENTATIONS, EXPRESSED OR IMPLIED, OR STATUTORY, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. Max-Air Technology warrants its products shall be delivered free from defects in materials and workmanship when these products are used for the purpose for which they were designed and manufactured. Max-Air Technology does not warrant its products against chemical or stress corrosion or against any other failure other than from defects in materials or workmanship. The applicable warranty period is dependent on the clearly identified brand labeling.

The warranty period for Max-Air, Max-Electric, Delta T, and Sesto Valves brand labeled products is for thirty-six (36) months from the delivery date to the Purchaser.

Any claims regarding this warranty must be in writing and received by Max-Air Technology before the last effective date of the warranty period, failing which this warranty shall expire. Upon Max-Air Technology's receipt of a warranty claim, Max-Air Technology reserves the right to inspect the product(s) in question at either the field location or at Max-Air Technology manufacturing plant. If, after inspection of the product(s) in question, Max-Air Technology determines that the Purchaser's claim is covered by this warranty, Max-Air Technology's sole liability and the Purchaser's sole remedy under this warranty is limited to the refunding of the purchase price or repair or replacement thereof at Max-Air Technology's option. Warranty repair, replacement or re-performance by Seller shall not extend or renew the applicable warranty period. Max-Air Technology will not be liable for any repairs, labor, material or other expenses that are not specifically authorized in writing by Max-Air Technology, and in no event shall Max-Air Technology be liable for any direct, indirect or consequential damages arising out of any defect from any cause whatsoever. If any Max-Air Technology product is modified or altered at any location other than Max-Air Technology – Wentzville (Missouri) or Max-Air Technology – Agrate Brianza (MB) ITALY without the express written authorization of Max-Air Technology, it is expressly not covered by this warranty. The warranties and remedies are conditioned upon (a) proper storage, installation, use, operation, and maintenance of products, (b) Purchaser keeping accurate and complete records of operation and maintenance during the warranty period and providing Max-Air Technology access to those records, and (c) modification or repair of products only as authorized by Max-Air Technology in writing. Failure to meet any such conditions renders the warranty null and void. Max-Air Technology is not responsible for normal wear and tear. The warranty for such products shall be subject only to the warranty relief, if any, provided by the suppliers and/or manufacturers of such products.

Features & Benefits

Air powered 90° rotary actuators for precise action and reliable long-life operation.

SS Series Stainless

The SS Series rack & pinion stainless steel pneumatic actuator produces linear torque output in a compact design utilizing the same body and end caps for double acting and spring return units.

The SS Series rack & pinion pneumatic actuators continue the Max-Air tradition of easy integration, flexible customization, and reliable operation. Features include two ISO bolt circle patterns drilled directly in the body, NAMUR standard mounting for accessories, and our patented ±10° adjustment for the open/closed positions, all backed by the best unlimited cycle life warranty.

Features:

- Compact Rack and Pinion Design
- 3D Models Available for All 17 Sizes
- Direct ISO 5211 Standard Valve Mounting
- Direct NAMUR Accessory Mounting
- Anti-Blowout Bi-Directional Pinion Retention
- High Visibility Open/Closed Beacon
- Pre-Loaded Spring Cartridges
- Double-Acting (Air-to-Air) Operation
- Spring-Return (Air-to-Spring), Fail-Close or Fail-Open
- Standard (CCW open) or Reverse (CW open) Rotation
- Patented Dual Travel Stop Design ±10° Adjustment
- Designed for High Cycles 1,000,000+
- Unlimited Cycle Life Warranty

Options:

- Female Double-D and Keyed Pinions
- T-Port & L-Port indicators for multiport applications
- Extended travel stops for greater stroke adjustment
- Alternative Operating Media (Water, Oil, Inert Gas)
- High and Low Temperature Options
- Fast Open / Fast Close Options

Temperature Seal Options

Available for MT Series and SS Series Actuators

Seals	Temperature Range
Super Low Temp. (FVMQ)	-67°F (-55°C) to 250°F continuous & 300°F cyclic
Low Temp. (Silicone)	-49°F (-45°C) to 250°F continuous & 300°F cyclic
Standard (BUNA-N)	-4°F (-20°C) to 176°F (80°C)
High Temp. (VITON)	-10°F (-23°C) to 250°F continuous & 300°F cyclic
Low Temp. Buna	-40°F (-40°C) to 212°F (100°C)

Specifications:

Rotation	90 Degrees ±10° Adjustment (SS12-SS66) Spring Return or Double Acting
Torque Range	Up to 47,250 in-lbs (DA) & 22,746 in-lbs (SR)
Ambient Temp.	-4°F to 176°F Standard (-67°F Low, 300°F High)
Housing & Endcaps	CF8M Stainless Steel
Pinion	AISI 316 Stainless Steel
Pistons	Epoxy Coated Die Cast Aluminum
Fasteners	AISI 316 Stainless Steel
Seals	BUNA-N Standard (high & low temp options)
Skates & Wear Bearings	Technopolymer
Spring Cartridges	Epoxy Coated Steel w/ Technopolymer Cartridge
Operating Pressure	40 to 120 PSI
Max Pressure Rating	150 PSI
Operation Media	Gas or Low Pressure Hydraulic Fluid
Mounting	ISO 5211, NAMUR VDI/VDE 3845
Additional Options	DD Pinions, Fast Acting, Extended Travel Stops

Mirror Polish Options

For stainless steel actuators in sanitary environments, antimicrobial and biofilm resistance can be increased with a mirror polished finish.

AISI 316 Stainless Steel

All external components (body, end caps, pinion and fasteners) are made in stainless steel (CF8M or AISI 316) for a superior corrosion resistance

High Cycle Life Design

Precision Honed Bore, High Cycle Wear Bearings, Rugged Tooth Design

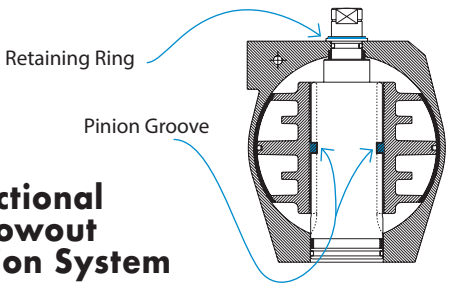
SIL3 Designed & Tested 1,000,000+ Cycles

MT Series actuators have a holistic high-cycle life design. To maximize actuator life and take full advantage of the warranty, Max-Air always recommends clean, dry air for operation and regular preventative maintenance. Rebreathers are readily available and also recommended to keep dirty environmental air out of the internals and prolong the life of seals and grease. The Max-Air MT Series design is tested and verified to over 1,000,000+ cycles under full rated load.

High Cycle Wear Bearings

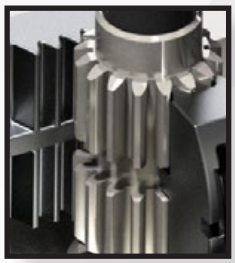
High performace technopolymer bearings eliminate metal-to-metal sliding contact.

- Low friction , Large contact area
- 2 axial + 1 thrust bearing for pinion
- 2 axial bearings per piston, plus zero travel stop bearing



Bi-Directional Anti-Blowout Retention System

The anti-blowout system of the pinion is ensured thru a double protection: both with an upper c-clip and two keyways casted on the pistons. In case of unusual downward movement of the pinion, the keyways will interphere with the grooves on the pinion and therefore stopping it.

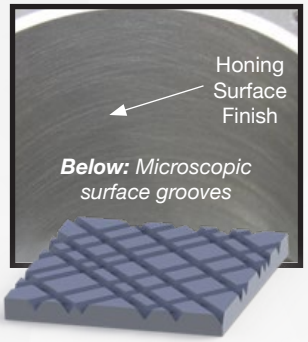


Rugged Tooth Rack & Pinion Design

The MT Series exclusive rack and pinion tooth design was created to better withstand valve "slamming" and other dynamic forces. After years of research and development, Max-Air was able to optimize a tooth profile for higher strength and resiliency, but with minimal backlash.

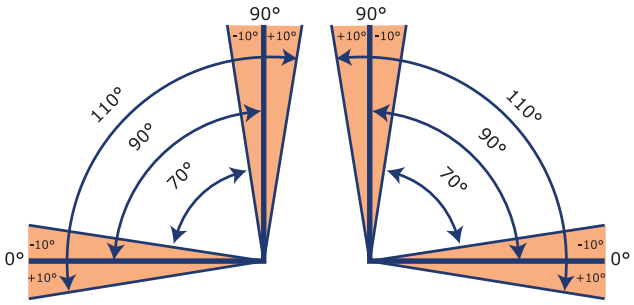
Precision Honed Bore

This high end feature, is not industry standard. A uniform bore surface provides consistent seal contact and compression. Micro-scratches provide even lubrication which minimizes the "wiping" effect. Our Honed Bore will provide consistent long-life operation with multiple seal materials and greases.



Patented Dual Travel Stop Design

Standard on MT Series, SS Series, & UT Series Rack and Pinion Actuators



STANDARD +/- 10° ADJUSTMENT OPEN & CLOSE

- Travel adjustable from 70° up to 110° rotation
- Angle seating capable with standard travel stops
- Compensates for slop in valve/actuator/coupling interface
- Typical industry standard is +/-3°

LINEAR PISTON STOPS, BOTH ON SAME SIDE

- Easier adjustment for tighter space requirements
- Cleary marked "0" (Closed) and "MAX" (Open)
- Extremely high repeatability, no hysteresis
- Allows for greater travel adjustment than rotary cam stops
- Lower degrees per turn allows for more precision
- No uneven side loading or wear on the pinion

OPTIONAL EXTENDED TRAVEL STOPS

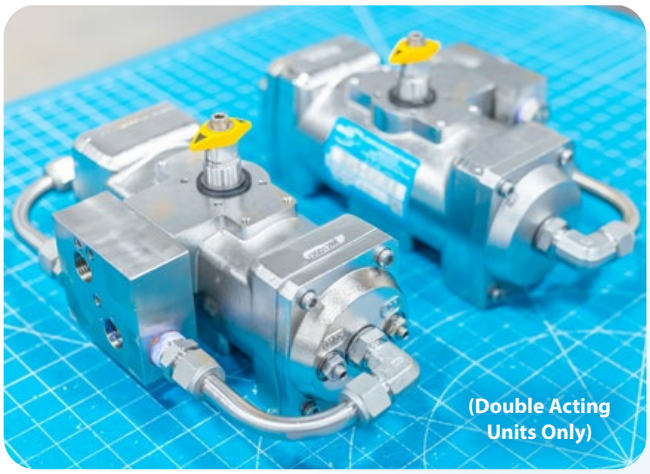
- Close adjustment up to 30° or more from full closed
- Open adjustment up to full actuator stroke (90° from open)
- Fail-safe applications where full close shutoff is not desired
- Special rotations where travel is much less than 90° (i.e. 45°, 60°)

Available Options

Air powered 90° rotary actuators for precise action and reliable long-life operation.

Adaptable to Run on Seawater

One of the unique uses we have found for our SS Series actuators, is the ability to run them using sea water as the operating media. With some slight in-house modification, Stainless Tubing, and our custom machined Stainless Steel High Capacity Flow Block, these actuators are read to handle the demanding requirements.



Materials, Coatings, & Special Finishes Compared

Increased Corrosion Resistance & Relative Cost

Materials/Coatings w/ Properties & Limitations

Options	Aluminum: Hard Anodized (Standard)	Aluminum: Anodized w/ Polyamide Epoxy Coating	Aluminum: Electroless Nickel Infused	Aluminum: Teflon Infused SS Mesh "Lock Mesh™" Coating	Stainless Steel: ASTM A351 Grade CF8M
Properties	Good general corrosion properties in most "natural" environments with pH from 4.5 to 8.5. Good resistance to salt air environments. The coating is extremely hard and resistant to abrasion.	The epoxy coating is relatively thick, which creates a barrier against many of the chemicals which anodizing alone cannot adequately resist. It will resist more acidic or basic environments than anodizing alone.	Uniformly thick coating with essentially no porosity and a reasonably high hardness. The coating is pure, tough, hard, and resistant to many types of corrosion media.	This coating provides complete surface coverage and exhibits excellent corrosion resistance properties in a wide variety of applications. In addition, it is FDA approved for food contact.	304 and 316 stainless steel are the most commonly used alloys. Both have good corrosion resistance but 316 is generally considered superior, however more expensive.
Performance Limitations	Highly acidic or basic environments will break down the coating.	Good general corrosion resistance, particularly in salt or alkaline environments. Limited resistance to acids. Surface chalking will occur when exposed to UV radiation. Also suitable for low concentrations of caustic washdown solutions.	The coating will provide enhanced corrosion protection in very acidic environments but will not withstand attack from strong alkaline media. Also suitable for low to medium concentrations of caustic washdown solutions.	These coatings are resistant to any environment into which an actuator would be installed. Provided the integrity of the surface is intact, the coating can resist a broad array of chemical environments at temperatures ranging from sub- zero to 350° F.	Although stainless steel does offer enhanced corrosion resistance, it also is dramatically higher in both cost and weight. The weight differential will often necessitate the use of special support bracketry. Corrosion resistance is superior.

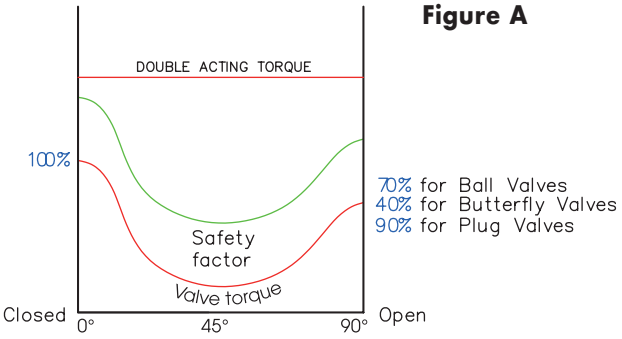
Explanation of Sizing

Rack & Pinion actuator produces a costant torque output (Fig A) that depends on the internal diameter and the air supply pressure: increasing one or both factors, torque increases.

Valve's operation torque is not constant but presents a trend different depending on valve's type. .

Figure A



Prior to sizing it's necessary to obtain the following information and data:

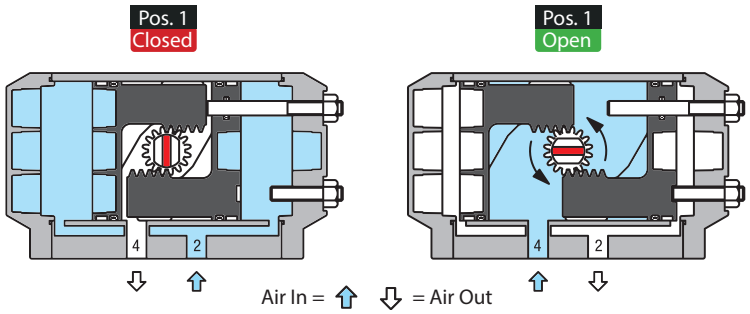
- Type of valve and rated torque
- Air supply pressure

The sizing is as follows:

1. Define the maximum torque of the valve to automate, increasing to 5% ÷ 50% the rated torque of the valve (according to the type of valve working conditions).
2. Once the necessary torque value is set, with the torque chart, and, in relation to the corresponding air pressure, find the torque value exact or exceeding.
3. Once the torque value is set, the left column of the torque summary table will show the required

Illustration of Operation: Double Acting

Below show the operation of a Double Acting actuator when air is applied to either port.



Spring Return: Torques, Sizing, & Configuration

Explanation of Sizing

The spring return actuator has a decreasing torque output throughout the stroke (Fig B). During the opening phase, the torque decreases, because the springs are compressed, and, working against the piston's stroke, absorb energy.

In the closing phase instead, the springs release this energy.
So the torque is stated with 4 values:

- Opening Start/Pos. 2
- Opening End/Pos. 2
- Close Start/Pos. 1
- Close End/Pos. 1

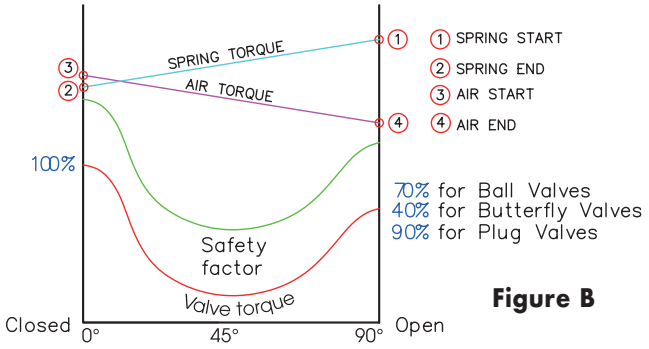


Figure B

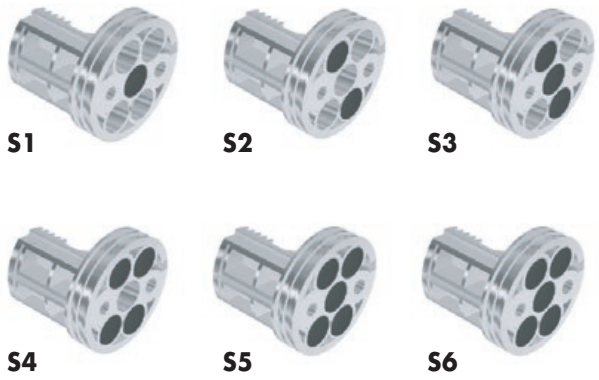
To size and choose an actuator, proceed as follows:

1. To determine the needed torque, increase of 25% ÷ 50%, depending on the type of the valve and working conditions, the value of the rated valve torque.
2. Using the "Spring return 90°" table, locate the End/Pos. 1 column, with the torque value either exact or exceeding the needed torque.
3. According to the air pressure supply, locate the End/Pos. 2 column, with the torque value either exact or exceeding the needed torque.

Spring Assembly Right Position



Spring Assembly Left Position

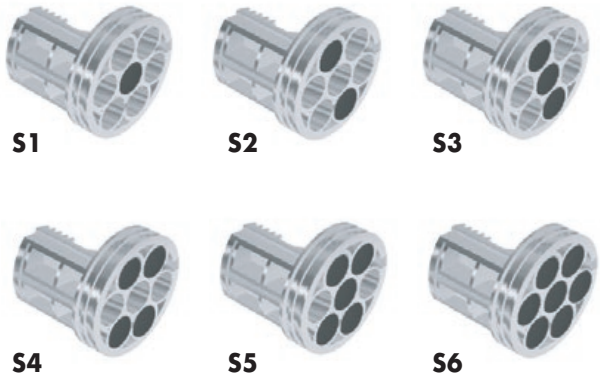


Illustration of Operation: Spring Return

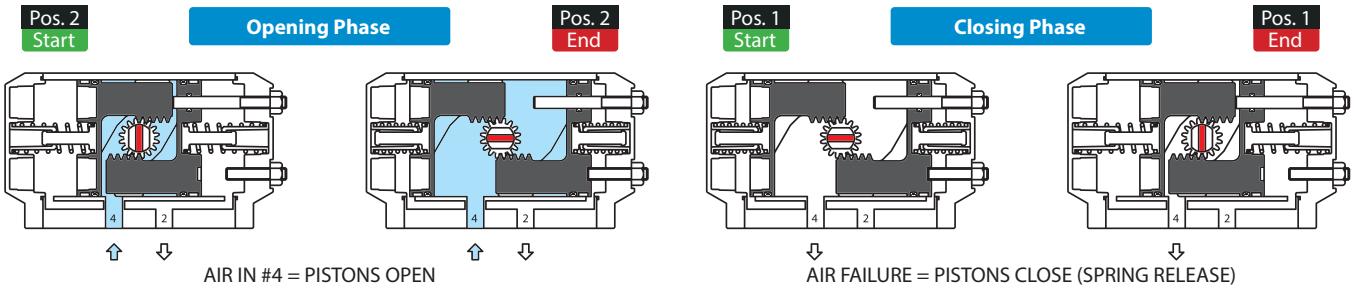
Below show the operation of a Spring Return actuator when air is applied to either port.



Torques can be found on the following pages.

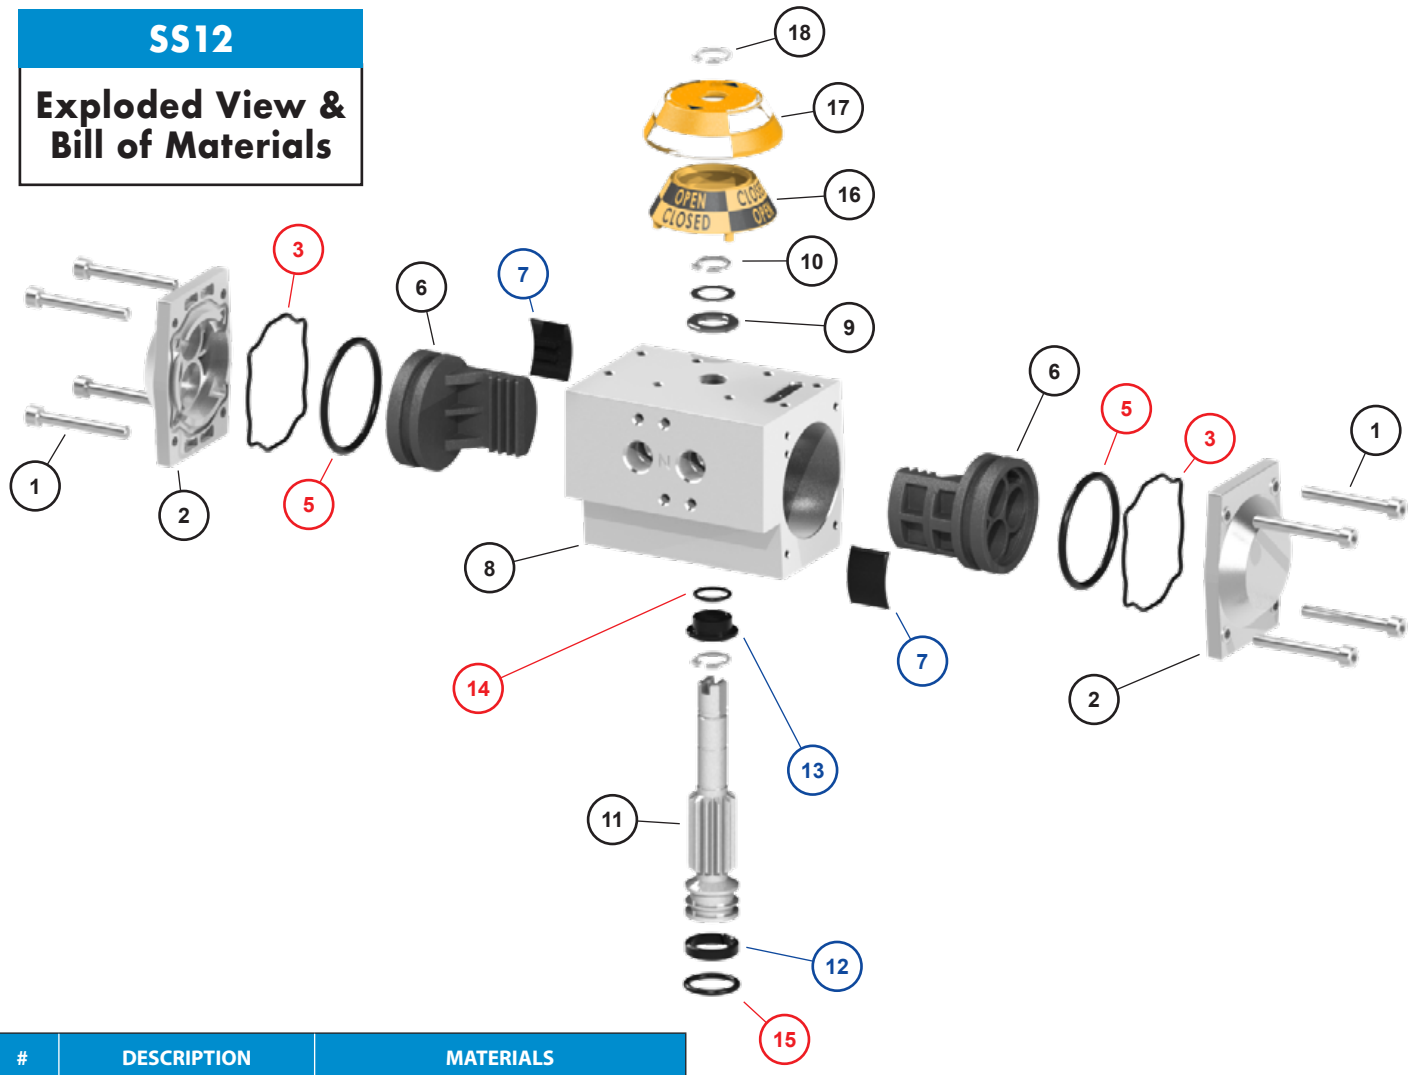
SS12 Technical Data

Exploded View, Materials of Construction, & Dimensional Data

SS12

Exploded View & Bill of Materials



#	DESCRIPTION	MATERIALS
1	End Cap Bolts	AISI 316 Stainless Steel
2	End Caps	CF8M Stainless Steel
6	Pistons	Epoxy Coated Die Cast Aluminum
8	Actuator Body	CF8M Stainless Steel
9	Upper Pinion Washer	Technopolymer
10	Pinion Snap Ring	AISI 304 Stainless Steel
11	Pinion	AISI 316 Stainless Steel
16	Open/Closed Indicator	Technopolymer
17	Indicator Window	Technopolymer
18	Indicator Snap Ring	AISI 304 Stainless Steel

SPECIAL NOTE

The smallest stainless steel actuator in our lineup, the MT12 actuator is designed witztravel stop adjustments to save space, while at the same time offered in both DA (double-acting) and SR (spring-return) configurations. Available only in Standard Buna-N Seals (-4°F to 176°F).

Blue = Items sold in the skates and wear bearings repair kit

Red = Items sold in the o-ring repair kit

#	DESCRIPTION	MATERIALS
7	Piston Skate	Technopolymer
12	Lower Pinion Bearing	Technopolymer
13	Upper Pinion Bearing	Technopolymer

#	DESCRIPTION	MATERIALS
3	End Cap O-Ring	BUNA-N
5	Piston O-Ring	BUNA-N
14	Upper Pinion O-Ring	BUNA-N
15	Lower Pinion O-Ring	BUNA-N

SERVICE	CODE	DESCRIPTION
Super Low Temperature	SLT	For super low temperatures down to -67°F, special super low temperature seals and lubricant must be used.
Severe Cold	LT	For temperatures below -4°F down to -49°F, special low temperature seals and lubricant must be used.
Standard*	STD	Actuators come standard with BUNA-N seals, which are good for normal temperature ranges of -4°F to 176°F.
Elevated Temperature	HT	For elevated temperatures up to 300°F, VITON® seals are available. Typical VITON® installations are good for 250°F continuous and 300°F cyclic.

*Only available with standard seals.

Certifications & Approvals

ISO 5211, NAMUR, Atex,

ISO 5211 Mounting

This standard defines a standardized interface system between industrial valves and the part turn actuators used operate them. It details the dimensional requirements for both the mounting flanges on both devices as well as the driving and driven components. This standardization simplifies the design of or eliminates the need for interface components between part turn valves and actuators.

Atex Global Approval:

In addition to being designed and produced according to sound engineering practice, the SS Series have also been certified to the relevant Atex standards for safety (Machinery Direcrive, annex VIIIB). Additionally it carries a CE mark and is in compliance with Annex VIIB of the Machinery Directive and regulation 80079-36.

NAMUR

The SS Series come with NAMUR accessory interfaces according to VDI/VDE 3845. The air interface is in the ¼" size.
